

VEINGOGH SPIDER VEIN REMOVAL

VeinGogh is one of the treatment we offer to treat spider veins.

BEFORE VEINGOGH SPIDER VEIN REMOVAL

- Do not apply any cream, lotion, oil, or self-tanners to an area of treatment on a day before and on the day of treatment.
- Please inform us if you have any of following conditions, pregnancy, seizure disorder triggered by light, photosensitivity, lupus, keloid formation, history of poor wound healing, noticed any pigmented lesion, have permanent makeup or receiving gold therapy, on immunosuppressants or anticoagulants like Coumadin/Warfarin.

POST VEINGOGH SPIDER VEIN REMOVAL

- We advise strongly to use sunblock every couple of hours, when out and about to minimize ultraviolet-related skin burns.
- Do not take blood-thinning drugs (e.g., Vitamin E, Gingko Biloba), ibuprofen, or other nonsteroidal inflammatory drugs (e.g., arthritis medicine) for 2 days before and 2 days after your treatment because these medications can increase bruising.
- If you take birth control pills or estrogen, inform our office about it.
- We recommend not to drink alcoholic beverages and not to smoke for 2 days before and 2 days after your treatment because drinking alcohol and smoking may impair healing.
- Bring and use loose fitting shorts or a leotard during the treatment and long skirt or long loose fitting slacks to wear after treatment.
- Use Dermaka cream on area twice a day for 7 days.
